

LH1000

Bass Amplifier

PRODUCT INFORMATION

2015

The Hartke LH1000 Bass Amplifier utilizes a Class A tube preamp and a straight forward user interface to complement the generous power handling and rugged design that's ideal for gigging musicians.

The LH1000 has a classic 12AX7 Class A tube front-end design with a solid-state output. Trick out the Bass and Treble shelving to give its warm tone an edge or use the Brite and Limiter switches to further sculpt your sound. Its intuitive front panel design also makes adjustments on the fly a breeze. Although the LH1000 is a perfect complement to our HyDrive Series Bass Cabinets, it also works as a seamless accompaniment to any bass speaker on the market.

Obviously a head with this kind of power is perfect for gigging musicians in any number of live applications, which is why we made sure that the LH1000 is as durable as it is versatile and powerful. With a 2-rackspace, metal frame chassis, steel faceplate and handles, this amp is made for the road. The LH1000's raw, reliable power is also perfect for additional shaping through your effects console or stompbox.
