FUEL Tank

Chameleon

POWER IT ALL

Congratulations on your purchase of Chameleon, the most versatile Fuel Tank power supply we've ever built.

Chameleon packs all the power you need to make your T-Rex pedals – and your playing – sound spectacular. And with 4 different voltage options, it will power just about any pedal that's ever been dreamed up.

Chameleon is a powerhouse of versatility, but it doesn't stop there. You get clean, quiet, isolated power outlets, an amazing 1.500 mA of total juice, and a big set of custom-made cables. And it's incredibly easy to use.

Turn the page for a few tips on how to get the very most out of your new Fuel Tank Chameleon.

SELECT, PLUG, AND PLAY

Getting started

Chameleon gives you 6 separate outlets for plugging your pedals into. Here's how they work:

- Outlets 1–3 can all be used to power either 9V or 12V pedals. For each outlet, just use the VOLTAGE SELECTOR switches to choose the voltage you need, plug in your pedal and go!
- Outlet 4 works the same way and gives you a similar choice – except that it's between 9V and 18V.
- Outlets 5 and 6 may only be used one at a time. If you use them both at the same time, you might get some noise. Like outlets 1–3, outlet 5 gives you a choice between 9V and 12V. Outlet 6 is a 12V AC outlet for pedals that require AC power.

All the cables you need

Your new Chameleon comes with a full set of cables to help you keep your board clutter-free. Once you've selected your voltage options, just plug in and play!
