

Know your space inside out. A great deal of mixing, recording and performance issues stem from inadequate environments or sound systems. Untreated rooms can often make recordings sound lacking in certain areas, whilst at the same time untamed low energy can create a false impression of low-end frequencies. The SubZero M100 Reference Microphone renders such issues a thing of the past.

Improve your recordings and live performances with drastic results thanks to high quality components and construction. Due to the ultra-flat frequency response and omnidirectional polar pattern, the M100 can show you exactly what is happening in your space so you can take active steps to improve the acoustics and sound quality.

---

## FEATURES

- Purpose built reference microphone designed to improve the sound of your room and sound system
- Achieve exceptional results thanks to high-quality components and construction
- Capture every last nuance via the 20-20,000Hz frequency response and omnidirectional polar pattern
- Requires an interface/mixer with phantom power to operate.

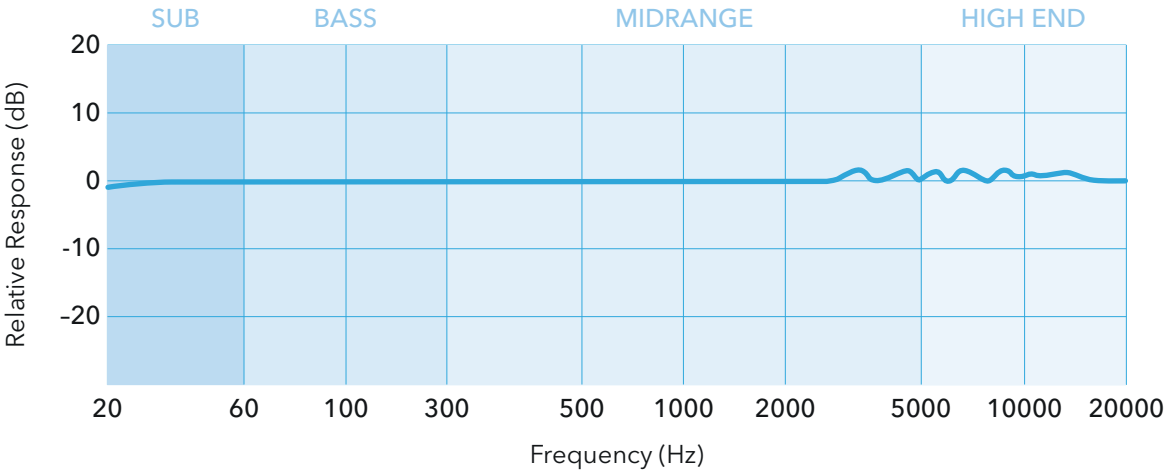

---

## PLEASE NOTE

It is advised not to use this microphone for recording purposes. It has been purpose built to accurately measure the acoustic characteristics of your room.
