PRODUCT DETAILS

Innovation and design awards

XGIMI is devoted to providing innovative products with outstanding quality and has won 31 international awards in 6 years. Brand efforts are highly recognized by the industry and millions of users.

Small and clear

1080p Full HD resolution from such a small product means you no longer have to choose between a portable projector and a high resolution. The advanced autofocus technology ensures that the projected image is always clear and bright. The body is only 14.7cm (5.8 inch) high, the net weight is 0.9kg (1.98lbs), meaning the water-bottle-size device fits neatly and easily into your bag.

Small and smart

MoGo Pro+ comes with XGIMI's latest Auto Keystone Correction feature, which delivers a rectangle image in seconds from sideways projection.

Small and powerful

A higher capacity built-in battery ensures you can enjoy longer playtime (2 to 4 hours video playback). Powered by Harman-Kardon dual-speakers, the sound is professionally tuned by Gold Ear Lab, meaning the sound is well balanced and perfect for any kind of music. You can also use it as an external speaker via Bluetooth or 3.5mm audio cable.

Small and fun

Android TV makes it easier to get more from your TV. Choose from 700,000+ movies and shows from a variety of streaming services. Ask Google to control your TV, get recommendations, dim the lights and control things with your voice. Chromecast built-in lets you stream photos, videos and music from smart devices to your TV.

Integrated stand

The integrated stand is hidden at the bottom of the MoGo Pro+. It can achieve a 0-30° elevation adjustment.

Unobtrusive auto focus

MoGo Pro+ will quickly autofocus when it's turned on or moved and keep the picture clear at all times.

Large memory

No internet on the go? Don't worry! MoGo Pro+'s 2GB + 16GB of memory can store up to 10 movies and 1,000 songs so you always have your favorite content with you.

Big 3D screen

The 100-inch full-HD large screen is equivalent to the size of four 50-inch TVs and will turn your home into a theater. The vivid picture is provided by an active shutter 3D imaging technology, which brings you the ultimate viewing and gaming experience (up to 300-inch). Additionally, the technology is gentle on the eyes.

Ultra-long lifespan

The MoGo Pro+ utilizes a highly efficient LED light source, allowing its projections to stay perfectly crisp, clear and bright for its entire LED lifespan of 30,000 hours. You could watch 4 movies with the MoGo Pro+ every day for the next 10 years without having to change the lamp.
